SOFTWARE ENGINEERING

FRONTEND/BACKEND DEVELOPMENT | API DEVELOPMENT | DEVOPS ENTHUSIAST

I'm a Software Engineer and Information Systems Technologist from the University del Valle, with a solid background in full-stack development (Node.js, Angular, React and RESTful APIs). Over time, I've been expanding my skills into cloud development and DevOps practices, gaining experience with AWS services, CI/CD pipelines, containerization (Docker), and Infrastructure as Code. I enjoy building scalable applications and continuously improving workflows to make development and operations more efficient. My career focus is evolving from pure full-stack engineering into a blend of software engineering + DevOps, where I can design, build, and deploy applications with both developer efficiency and operational excellence in mind.

TECHNICAL EXPERTISE

Languages & Platforms: JavaScript | Node.js | HTML5 | CSS3 | PHP | Rabbitmq

Frameworks, Tools, and Version Control Systems: Git | React.js | Next.js | Angular | RoR 5

Databases (Relational): MySQL | PostgreSQL | SQL

Databases (NoSQL): Firebase

Cloud Computing Tools: AWS

Operating Systems: Unix (Linux) | MS Windows | macOS

Methodologies: Agile (Scrum, Kanban, and Scrumban)
